

Concrete Construction: Post-Fabrication General Instructions

Scope Statement

Complete inspection, witness repairs, give approval, and complete paperwork for finished project.

Procedure

QC/QA

1. Ensure that the members remain undamaged during transportation from the bed to the storage area, and that the members are properly blocked to prevent damage during storage.
2. 2. Witness all repairs of surface imperfections. Secure up-front Structures Division approval for all major repairs (i.e., honeycomb, cracking, windows, etc.).
3. 3. After the prefab members are complete, check the dimensions and overall quality of the members. If acceptable, place a red UDOT sticker on the member.
4. 4. Write a test report, send a copy with the Bill of Lading to the Project Engineer, and route the original through the standard distribution system.
